# Memilih Cooling Device

Pada kesempatan ini mungkin kami tidak terlalu banyak membicarakan apa itu *cooling device*, karena tentunya produk yang satu ini sudah banyak dikenal dengan berbagai merk dan juga jenisnya.

Banyaknya jenis cooling device yang berada di pasaran saat ini, yang membuat kita semakin susah menentukan mana yang sesuai dengan kebutuhan kita. Dan sebagai bahan referensi Anda untuk memilih cooling device untuk processor dan sistem Anda, maka Anda bisa melihat dalam "Product Review" kami edisi ini.

Selain itu, ada beberapa catatan untuk Anda yang ingin membeli sebuah cooling device yang baik, di antaranya adalah perhatikan kipas yang digunakan apakah kipas tersebut menggunakan *ball bearing* atau tidak, karena jika tidak tentunya umur dari kipas tersebut tidaklah lama. Namun, satu kekurangan dari kipas yang menggunakan ball bearing adalah dari *noise* yang ditimbulkan yang agak lebih bising ketimbang kipas non-ball bearing.

Untuk pendingin processor, ada juga tambahan lain yang harus diperhatikan yaitu dari bahan material *heatsink*. Untuk cooling device yang baik, tentunya harus menggunakan heatsink dari bahan *cooper* atau tembaga, karena pada tembaga mudah mengalirkan panas sehingga jika terkena udara panas akan cepat hilang—jika dibandingkan heatsink dengan bahan alumunium.

Selain menggunakan heatsink dan juga kipas, sekarang ini sudah banyak cooling device yang menggunakan air sebagai pendingin, untuk memaksimalkan pendinginan pada processor. Dari hasil yang diberikan, tentunya cooling device dengan menggunakan air akan lebih baik.

Namun untuk menggunakan cooling device yang menggunakan air tidaklah mudah, karena jika Anda kurang berhati-hati maka air dalam pendingin tersebut akan tumpah dan bisa menghancurkan komputer Anda.

Dan untuk menentukan pilihan Anda pada cooling device yang cocok, sebaiknya disesuaikan dengan kebutuhan Anda.—*AY*
